

Homemade Stun Gun

A homemade stun gun is quite an easy hardware hack, all that is required is;

- ◆ 1) A disposable camera (Preferably a Kodak one)

- ◆ 2) Soldering Iron

- ◆ Step 1) First off, take off the protective plastic case of the camera.

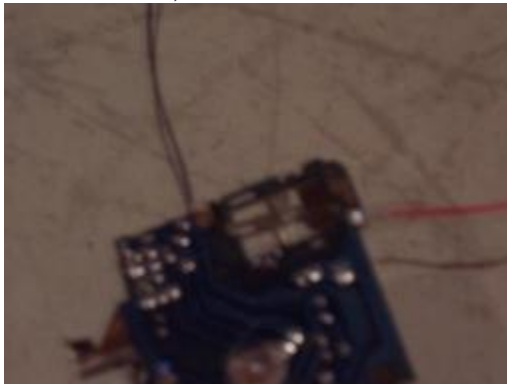

- ◆ Step 2) Remove the battery so you don't shock yourself.

◆ Step 3) You'll see a little light bulb about 3/4 inch long. Carefully remove that without destroying anything.

◆ Step 4) You should see two pieces of copper on both sides of the bulb. (see picture, Red Circles) Solder one wire on to each one of these, not together.

◆ Step 5) Slap the battery back in and hold down the button, touch the wires to desired object and watch the sparks fly!

◆ Safety Issues

◆ Because this isn't very safe and you have a chance of getting shocked, (personal experience) an easy way to make a protective case is to.

◆ Step 1) Cut apart the hard plastic inside of a "Five Star" binder. The tough plastic is very flexible and can just be glued together.

- ◆ Step2)Cut to fit the stungun inside.
- ◆ Step3)Glue together. Don't forget to cut a hole for the button, cardboard works as a good depressor so you don't have to make direct contact with the button. Also slapping a cut up rubber glove over the stungun adds extra protection.

Enjoy!
